

Ergonomic Shafts and Chucks

Sometimes keeping a line operator happy means keeping his back happy. Which is just one reason why Tidland offers a complete line of lightweight air shafts.

From the new Ultra-lightweight GX to our array of lightweight carbon fiber Ultrashafts, we have a shaft to fit any need. Our lightweight carbon fiber shafts weigh an average of 50% less than standard shafts and the GX reinforced lightweight aluminum shaft is even lighter. That means easier handling and less injuries for your operators. Not bad for a lightweight.

Our engineers review each application to determine the best balance of strength and shaft weight best suited for your web. Then each shaft is built to meet your exact specifications and reduce ergonomic injuries and workers' comp claims.
